THE BASILICA OF HIPPOS OF THE DECAPOLIS AND A CORPUS OF THE REGIONAL *BASILICAE*

Michael Eisenberg*

Abstract

Hippos was a small Graeco-Roman city in Roman *Syria-Palaestina*; yet, it holds a prominent place in the modern research of Roman provinces thanks to years of orderly exploration, and the state of preservation of its remains. In no other field does it feature more prominently than in the research of *basilicae* – the basilica of Hippos is one of the only *basilicae* in the region that has been fully excavated and preserved with high degree of detail. The excavated material and the architectural characteristics reveal that it was erected at the end of the 1st century CE and destroyed in the 363 CE earthquake. High quality stucco and vivid wall paintings of the inner décor, which covered the walls and the basalt colonnades, attest to the elegant look of the basilica's interior. Some marble architectural fragments point to limited renovations, typical for provincial in-land cities in the 2nd–3rd century CE. The basilica at Hippos almost fully visualizes how this type of building was reproduced outside of the core of the Roman Empire. The short comparative study included in the article not only contextualizes the findings from Hippos, but also reveals a narrative of the regional *basilicae* – they belonged to the 'Vitruvian' and 'Pompeian' types, were constructed between the 1st century BCE and the 3rd century CE, and went out of use no later than the 363 CE earthquake.

Introduction

Antiochia Hippos was one of the Graeco-Roman cities of the Decapolis, founded on top of Mount Sussita, ca. 2 km east of the Sea of Galilee in the first half of the 2nd century BCE¹. The main excavations at the site began in 2000 under the auspices of the Zinman Institute of Archaeology, University of Haifa, Israel².

The basilica of Hippos stood in the center of the city, immediately northeast of the *forum*, towards the northern cliff of the mountain (Figs. 1 – 3). Its remains were completely buried, and the archaeologists had no clue as to what they were

* Acknowledgments – I wish to thank Arthur Segal for his valuable insights and Arleta Kowalewska for her language editing and refining of the text. Thanks are due to those who supervised the basilica area throughout the years, mainly to Haim Shkolnik, for their professional work and field reports. I am grateful to the Zinman Institute of Archaeology of the University of Haifa for supporting the excavations logistically in the field and in laboratories.
